

Choose **your meal** online via UZA@home

Are you staying at the UZA for several days? Then you can also make your meal choice online via our patient portal UZA@home. Read how to do this below. If necessary, ask the nursing assistant to help you choose your meals.

How do I submit my meal choices online?

1

Download the UZA@home app via the App Store (iOS) or Google Play (Android). You can use the wifi in the hospital 'UZA_Internet'.

2

Sign in with your itsme® app.

As a family caregiver, you can also log in to the patient's account. You can read how to do that via the QR code.

Foreign patients (without a Belgian national number) cannot log on digitally in UZA@home with eHealth, but have to sign an informed consent (IC) on site at the UZA to get digital access with a box code. Ask the medical assistant for more info.

3

On the homepage of UZA@home, under the 'Services' tab, click on 'My meal choice'.

4

Select a day and a meal time. Click on a blue icon for breakfast, afternoon or evening. You can always select for five days ahead.

Colour codes:

- **Grey:** You can no longer make a choice. The time for doing so has expired.
- **Blue:** proposed meal, but you have not yet made your own choice.
- **Green:** you have correctly entered your choice yourself.

5

Scroll down to read the proposed menu. If you agree with the proposal, click on the blue bar 'Order menu of the day' at the bottom.

6

If you want to customise the menu, click on 'Compose your menu' at the top right. Choose from the different ranges. Then click on 'View and confirm your menu'.

- If you agree with the menu you have created, click 'Order menu'.
- If you still want to make a change, click 'Adjust menu'.

7

Remember to always confirm.

If you are on a diet, the dishes are adapted to your diet. If your diet changes, your previous choices are lost and you need to enter your new choices.

Discover the UZA mobile app

With UZA@home, we are working on a digital, interactive patient portal. Our patient portal is still under development. **Scan the QR code** for the latest updates, [FAQ](#) and a [roadmap](#) on [how to install the app](#).
